

CLAIMS

1. A display device of an electronic apparatus for setting a plurality of conditions for a process of the electronic apparatus through an input operation while displaying the conditions before the electronic apparatus performs the process in accordance with the conditions, the device comprising:
 - determining means for determining whether or not each of the conditions has not yet been set; and
 - display control means for displaying notifying information indicating to what degree conditions remain to be set.
2. The display device of an electronic apparatus according to claim 1, wherein the notifying information is the number of conditions which have not yet been set.
3. The display device of an electronic apparatus according to claim 2, wherein performance of the process is started when the number of conditions which have not yet been set reaches 0, the number being displayed by the display control means.
4. The display device of an electronic apparatus according to claim 2, wherein information for prompting an operation for starting performance of the process is provided when the number of conditions which have not yet been set reaches 0, the number being displayed by the display control means.
5. The display device of an electronic apparatus according to claim 1, wherein, after items of the conditions are displayed, the notifying information is represented by switching a method of displaying each of the items of the conditions, depending on whether or not the item of the condition has already

been set.

6. The display device of an electronic apparatus according to claim 5,
wherein performance of the process is started when the display control means
5 uses the displaying method to display that all the items of the conditions
have already been set.

7. The display device of an electronic apparatus according to claim 5,
wherein information for prompting an operation for starting performance of
10 the process is provided when the display control means uses the displaying
method to display that all the items of the conditions have already been set.

8. The display device of an electronic apparatus according to claim 1,
wherein the conditions are set through an input operation to be either one of
15 a default content and an arbitrary content.

9. The display device of an electronic apparatus according to claim 1,
wherein a touch panel for inputting the conditions is provided on a display
screen.
